Day 1053 - The Enneagram Type Combinations - 5&8, 5&9, 6&6 - Ask Gramps

Best app to read light novels ios.

In the words of Bon Jovi (opens in new tab), woah, we're halfway there. I'm midway through my novel's first draft. It feels much like crossing the 13.1 mile mark in a marathon - a sense of achievement, tempered by the realization that I have to do the same thing all over again. Still, I have a good idea of where I need to go and how I'm going to get there, and it isn't going to involve any blisters or horrible sticky energy gels. Seriously, who thought peanut flavor was a good idea? I've had to double back a few times, re-writing and rearranging scenes that didn't sit right. Those occasions have required a quick trip into LibreOffice Writer (opens in new tab) (try it - you won't believe it's not Word), but the rest of the time I've stuck with the superb distraction-blocking writing software FocusWriter (opens in new tab). FocusWriter's design means you can't just open your web browser for a little quick research, accidentally get lost down a hole of Facebook and cat videos, and end up wasting half an hour of precious writing time. You can set yourself goals, blank out everything except the section you're currently working on, and give yourself a hearty pat on the back if you achieve a 'streak' by meeting your targets for several days in a row. There's a built-in spellchecker and an auto-save function so you don't lose anything if Windows decides its updates are more important than your work. It really is a brilliant little tool, so I caught up with its creator Graeme Gott (opens in new tab) to find out what inspired him to create it. FocusWriter - lean, clean and (if you set yourself particularly tough targets) potentially mean Hi Graeme! Thanks so much for your time. What prompted you to create FocusWriter, and what were your main aims in doing so? My wife was frustrated with the word processing options for Linux. The ones that she had available to her at the time were all either bloated, overcomplicated, or buggy - plus, she was struggling with distraction issues. I don't remember exactly when and how the idea was sparked, but I set out to create a writing environment for her that would be fast, simple, and comfortable to use. Someplace where she could go to immerse herself in her imaginary worlds. Every major design decision has been based on her real-life needs and experiences, and that's really where FocusWriter gets its focus. How has FocusWriter evolved over the years? Has it developed in any unexpected ways? I've always striven to maintain simplicity with FocusWriter, but in the beginning I mistook simplicity for a complete lack of features. The biggest surprise for me was simply learning what worked and what didn't for writers. I'm pleased by the collection of features it's gained over the years, though I do have to be careful. It's tempting to add every feature suggestion I get, but if I did, the program would lose what makes it FocusWriter. I have a strong vision for what the program is, at its heart, and the features I've added (and the ones I haven't) have all been in service of that vision. How did you get involved in open source programming? Honestly, I just jumped right in! I'd already been using both Linux and open source programs for years, so I decided that I wanted to 'give back' to the community that had supported me for so long. I think that if you're interested in open source, you should figure out where your passion lies, and just go for it. Actually, that's kind of my life advice as well. Which of your other projects should our readers check out? The writers in the crowd might be interested in NovProg (opens in new tab): basically, a progress chart for writing your novel. Specifically, it's based off of NaNoWriMo (opens in new tab) (National Novel Writing Month), wherein writers commit to writing a 50,000 word novel within 30 days. NovProg has a bit more flexibility than that, but it's still designed for those times when you want to set a goal and meet it. Meeting your daily goal gives you a real boost - especially when you achieve a streak by achieving it for several days running. My longest streak is a fairly shameful five days Speaking of NaNoWriMo, this year's challenge (opens in new tab) is nearly upon us. In November, people around the world will take to their keyboards to "find their voices, achieve creative goals, and build new worlds - on and off the page". It's taken me four months to hit 50,000 words at a comfortable pace with some ad-hoc revisions (my first draft will sit around 90,000), so I have nothing but respect for anyone who can turn around that volume in just 30 days. Granted, I'm not aiming for speed, but completing NaNoWriMo is an enormous achievement. If you're planning to give it a try, best of luck! Cat Ellis has turned to technology to help write her first novel. Follow her progress in her Sculpt Fiction column. Nope. The Windows Phone app Photo Light isn't a flashlight app to use when taking pictures. It's a lite photo editor for your Windows Phone that isn't too shabby. The main menu of Photo Light has five tiles that give you options to load an existing image from your Pictures Hub, launch your camera to capture a new image to edit, display the EXIF file information on images, access the app's settings and view the About screen. Just a quick note about the EXIF information: it's not only will Photo Light display the data contained in the image's EXIF file but it will also map it out if GPS data is present. For those not familiar, the EXIF file is short for Exchangable Image File that is a metadata file that contains all the information your camera collects as it takes a picture. The amount of information varies from camera to camera but in general, the EXIF will contain camera settings, image size, date/time taken, and more. Now back to Photo Light. The editing page for Photo Light is laid out nicely with your image size displayed at the top of the screen and your controls lining the right side and bottom of the screen. You can move your photo around by touch as well as pinch to zoom. Editing controls include: Viewing the EXIF information Convert image to grayscale (black and white) Rotate the image Undo editing effect Crop the image Adjust Contrast and Brightness Resize the image Sharpen the image Noise removal Invert the image. There is also a collection of filters you can apply that include sepia, pligra (looks like it dials down the saturation), 1989 filter (Polaroid style), dark times, vignette, emboss, and blur. Once you get all the edits finished you can save your edited image to your Pictures Hub as well as share it on Facebook or Twitter. I really can only point to two nits with Picture Light. First, the undo button doesn't always work. You can apply filters or adjustments and when you hit the Undo Button you will see a "Unable to undo anymore". Granted you always have the option to re-open the image and start from scratch but why have an undo button if it won't undo? The other nit is that if you enlarge or position the photo you're editing the full width of the screen, it can hide the side buttons labels. Until you get accustomed to Photo Light this can make navigating around things a little tough. Still, even with the app's minor quirks Photo Light is a really nice photo editor for your Windows Phone. If all you need is the basic editing tools, to share the edited images, to view the EXIF file and see where the image was taken on a Bing map, Photo Light is worth considering. There is a free trial available for Photo Light, which is basically an ad-supported version. The full, ad-free version of Photo Light will run you \$99. You can find it all here (opens in new tab) at the Windows Phone Marketplace. (Pocket-lint) - The default phone and contact apps on Android are good, but they only get you so far. They don't allow a huge amount of customisation for example, nor do they look to support international business travellers in the way that you might need. PixelPhone is an Android app that aims to replace your default Phone and Contact on Android offering you a number of features to speed up and

improve using your phone on a daily basis. The app features: - Easy-to-use launch and go and allows you to quick search and fast dial by QWERTY & T9 dailer. - Fully customised interface that lets you change the font size, photo size, theme colors and SIM card icon to suit your style and needs. - Various themes and plug-ins that can be downloaded for free so help you make the app suit your style. - Dual mobile phone SIM-card that allows up to three SIM cards including auto selection of mobile phone SIM-card based on rules (mobile phone mask and contacts. - Quick dial Support that allows you to swipe for call or message. - Blacklist feature to help you block unwanted callsand report harassing calls. Looking to expand on what the default offering delivers already, the new app, which is now free, allows things like easy grouping of contacts so you can create groups for different types of contacts, as well as, assigning that group custom ringtones or be able to send them all an image or message at the same time. It means talking to your family or co-workers at the same time becomes much, much easier. Pocket-lint But it's not just about speeding up talking to others. The app allows you to fully customise the apps interface, from changing the font size to the compactness of the dial pad, as well as, letting you enjoy the variety of themes available to change the look and feel of the app. For international travelers, there is a support for a multilingual dialer that gives audio and vibration feedback, and dual mobile phone SIM-card support that allows up to three SIM cards. The app automatically selects the right mobile phone SIM-card based on rules you've set (mobile phone mask and contacts for example). Users can create a blacklist to block unwanted calls and the app even goes as far as letting you report harassing calls so you don't get constantly bombarded with unwanted interruptions. The most exciting features are: - Contacts and group management support for group message; photo and ringtone modification, organisation. - Customized gestures to give you even more control, like swipe left-right to call/message/SIM1/SIM2. - Customized multilingual dialer with vibration/audio feedback. - Merged call history by date, contacts and call. - Concise dial pad. - Adjustable dial pad size. - Group of frequent contacts and quick dial. - Customized frequent operations of contact. - Number missed call. - diacritics-insensitive search. In the future, Russian developers Felink, say they will add a call recording feature and the ability to see not only who is calling, but where they are calling from. You can get the PixelPhone app from the Google Play store here
